

To hear why Genesis records on Sony digital equipment, play them back on a Sony Compact Disc Player.

When it comes to capturing the experience of live music, no audio equipment delivers the lifelike reproduction of digital audio.

That's why the only digital recording equipment chosen by Phil Collins, Tony Banks and Mike Rutherford of Genesis is, not surprisingly, the leader in the industry: Sony.

Not only has Sony led the way in professional digital recording equipment, we invented the digital audio system for playback—the compact disc player. Sony also introduced the first home, car and portable CD players. And Sony sells more types of compact disc players than anyone else in the world.

No matter what Sony Compact Disc Player you choose, each allows you to hear the music the way the artist originally recorded.

So why not do what Genesis does? Play back the top-selling compact disc like Tavish's "Track" the way they were recorded. On Sony Digital equipment. You'll

find that when it comes to bringing you closer to the music, nothing even comes close.

The Sony CDP-55, Sony's best value in a full featured compact disc player.

From the Unidexer Claviers and digital Elix to the programming flexibility and speed of Remote Commander™ unit, the Sony CDP-55 has everything you need in a home CD player.

SONY
THE LEADER IN DIGITAL AUDIO™
